

RAG implementation on Write.webseed

Todo

In Progress

Need to create task to enhance the RAG pipeline on write.webseed

- <https://healthrangerstore.slack.com/archives/C06C2PXD9B/p1743872601304179> Check and expand the input of Enoch-Deepseek for RAG engine to more like 64K tokens. estimation 6 Hours
- <https://healthrangerstore.slack.com/archives/C06C2PXD9B/p1743882875832879> Add new data from Mike to the Pinecone ingestion queue. estimation 3 Hours

Done ✓

- ☒ [RAG-augmented instance of Qwen2.5-32B on AWS](#)
 - ☒ Create function to reads all txt files from a given directory
 - ☒ Create function to break down each text in a list of texts into chunks of a maximum size
 - ☒ Create function to generate embeddings for a list of documents.
 - ☒ Create function to generate a short ID based on the content using SHA-256 hash to add Unique IDs to Data
 - ☒ Create function to combine embedding vector and text
 - ☒ Combine documents with their embeddings and metadata.
 - ☒ Create function to upsert data into a Pinecone index.
 - ☒ Download and config BAAI/BGE-M3 model for embedding
 - ☒ Create function to Query the Pinecone index.
 - ☒ Create function to combine RAG to LLMs
 - ☒ Test upsert data to Pinecone database after indexing with API key
 - ☒ Embedding and indexing the 6GB of our core data + 6GB of synth data
 - ☒ Create a new layout for RAG implementation project on write.webseed
 - ☒ Deploy to write.webseed

Enoch Wellconsumer

Todo

Mockup UI shown [here](#):

- ☐ Added a settings dropdown menu for Gold and Platinum members to switch between the default and reasoning models.
- ☐ Add view to shows a "unlock" popup message.
- ☐ Add dark, light mode
- ☐ View Profile UI
- ☐ Add UI view if there is no exist user found after retrieve API
- ☐ updated text for platinum members.
- ☐ Create webhook for shopify to receive when user update their order.

In Progress

- Record a video to show the implementation have done.

Done ✓

- ☒ Develop function to check user tier by fetch data from Shopify API
- ☒ UI design for Home view
- ☒ Copy button for chat message
- ☒ Develop function to send session login password to user via email
- ☒ <https://app.shortcut.com/cwclabs/story/34897/develop-function-to-send-response-message-of-llm-to-websocket>
- ☒ Add delete chat UI
- ☒ Add delete all chat history
- ☒ Regenerate function for chat
- ☒ Develop cronjob to reset amount of question per day base on user tier
- ☒ Create function to deduct amount of question per day base on user tier
- ☒ Develop function to check user tier by Retrieve, check from Active campaign
- ☒ Develop function to retrieve amount spent of user around 3 months for Shopify
- ☒ UI design for chat page
- ☒ UI design for login page
- ☒ Create database schemas for chat
- ☒ Create database schemas for user
- ☒ Create websocket to receive streaming response of chat message from LLM
- ☒ Create websocket to receive streaming response of chat message from LLM for Ingredients checker

Continuous Pretraining Qwen2.5-14B

Description: NEW TASK FOR NEIL: I want you to download all our .txt data files, they contain unstructured text data. I want you to figure out how to run CPT (continuous pre-training) on Qwen2.5-14B, the base model 16-bit FP), using CPT. Note this is NOT an "instruct" model but rather just the base model. See if you can make that happen. The compute should take maybe 4 days on the 8-GPU cluster, something like that. Once you have the CPT output done, then we can use fine-tuning to transform it into an instruct model. Find a good "instruct" SFT data set, or I will also look for one. Please proceed with the CPT task first.

Pending due to Mike's request:
